Subject: Arkema UPDATE - Temporary Cooling System to Ambient Peroxide
Date: Monday, September 4, 2017 3:49:30 PM

The UC agreed precautionary plan to introduce a temporary cooling option to protect the ambient temperature organic peroxide within Arkema's building 21 was completed at 1530. At this time using 4 tons of dry ice placed inside the bays storing the peroxide within the building is most practical and efficient approach. Again, the material has a very high SADT and does not pose an imminent threat of decomposing but as a precaution and in concurrence with UC the RP proceeded with the temporary cooling option.

The UC has stand down and demobed from the operations center. The Harris County Health Department and the Harris County Pollution Control are coordinating with Arkema any health inquiries that could come from the nearby community. As part of the UC, EPA is demobing from the incident.
